

Dimension sheet

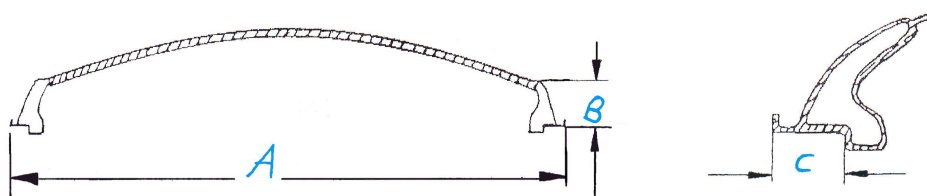

CORNETT Sunvisor | Visiere | Parasol

Welcome,

You are interested for a sunvisor, but can't find your vehicle in the type list?

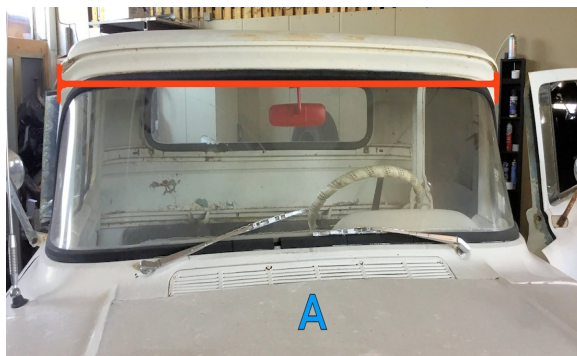

No problem – We can usually produce sunvisors for almost all classic vehicle. We only need **3 dimensions** (A-B-C) for this, in order to produce it for your model, or to select the right brackets and fittings.

A:

Here we need the overall dimensions of the window front, i.e. from the **outer edge of A-pillar to A-pillar**.

It is best to measure straight through the vehicle with the doors open.

B:

Here we need the width of the A-pillar itself, so that we can build the appropriate shape of the determine side fittings.

Please measure without seals!

C:

Here we need the inside dimensions of the A-bar so that we know how deep the corresponding side fitting has to protrude into the bar.

Important: If your vehicle has a rain gutter, please let us know.

The more precise we get the information, the better the production can produce the side brackets and select the fittings. However, please also note certain manufacturing tolerances. You are also welcome to send us a picture of the front and the A-pillar with the dimension sheet.

For further inquiries, we are at your disposal,
